AB - PURPOSE: To protect software by ciphering a decipher key of
software with an individual key of a user to obtain assent
information and enabling only a regular user to decipher the
decipher key from assent information.
CONSTITUTION: In a software managing part 1, an individual key of
the regular user is generated by an individual key generating
part 3 and is reported, and software of a normal text is ciphered
with the decipher key by a software ciphering part 5 to obtain a
ciphered text, and the decipher key is ciphered with the
individual key by a key ciphering part 4 to obtain assent
information. Ciphered text software and the decipher key ciphered
as assent information are transferred to the user. Though
software presented from the software managing part 1 is copied,
deciphering and execution without the decipher key are impossible
because it is ciphered, and thus, software is protected.
